

# Install Instructions

## Let's keep everyone secure with Enterprise Security for WHMCS.

It doesn't matter what version of WSC you use, Paid or Free. All that matters is end-user security. Here you will learn how to install the latest version of WSC in a few minutes. There are two ways to install WSC. FTP & File Manager. We deal mostly with cPanel systems but the same process applies to Plesk and DirectAdmin. Once you install WSC, you will get automated version upgrades on Free and Paid licenses.

### Download & Upload WSC

From the [DevGB](#) client area download the version of WSC you wish to install. Remember to check the requirements for that version against your WHMCS environment. You must use the correct version of WSC or you could see unexpected consequences like error pages.

- **Upload WSC via FTP**

Extract the WSC download to your desktop. You will see the modules folder. Upload the entire modules folder to the root of your WHMCS install. For example. If you are using cPanel and your WHMCS was at [www.dev.gb.net](http://www.dev.gb.net). You would upload the modules folder to the public\_html folder. Once uploaded WSC will be located at /modules/addons/tickets\_credentials. You will also notice the update module packaged with WSC. This will be located at /modules/addons/updatemanager.

- **Upload WSC via File Manager**

Connect to your hosting account—for example, cPanel. Click "File Manager" and navigate to the directory where WHMCS is installed. Upload the WSC download from the DevGB client area. Use the file manager to extract the files in the root of your WHMCS install. WSC will be located at /modules/addons/tickets\_credentials. You will also notice the update module packaged with WSC. This will be located at /modules/addons/updatemanager.

### Activate WSC

- In the WHMCS administration area navigate to Settings > Addon Modules. Activate the Update Manager and WSC modules.

- Assign admin privileges to both modules and enter an Encryption Key for WSC.
  - The encryption key needs to be 16 letters long at minimum. HiGhEr and LoWeR case with numb3rs.
  - Please see [WSC encryption keys](#) for more information.

» WSC  
 Request and share credentials and sensitive information on tickets.  
 For more info visit our [docs website](#).  
 Got a feature request? Submit your idea in the [feature request](#) area.

2.1.0

DEV CB

Activate
 

Deactivate

Configure

License key	WSC-Pro-xxxxxxxxxxxxx	Your WSC license key.
Encryption key	.....	This is used to
Access Control	Choose the admin role groups to permit access to this module: <input checked="" type="checkbox"/> Full Administrator <input type="checkbox"/> Sales Operator <input type="checkbox"/> Support Operator	

Save Changes

- Finally. Navigate to Addons > WSC. In the WSC UI navigate to [WSC Forms](#) and click the save button at the bottom of the page. This adds the default tables to the database.

## Configure Auto\_Reply Cron (WSC Pro Licenses)

So that the ticket updater posts updates to tickets configure the below cronjob to run every minute or five minutes. The cron command below assumes you are using cPanel with Easy Apache and PHP 8.1. The path to the cron file is /modules/addons/tickets\_credentials/autoreply\_cron.php for other environments.

```

/opt/cpanel/ea-php81/root/usr/bin/php -q
/home/CPANEL_USER_NAME/public_html/modules/addons/tickets_credentials/autoreply_cron.php >/dev/null
2>&1

```

## Configure WSC

WSC is now installed and ready to be configured. This part differs for Free and Paid licenses so we will deal with the basics. For all users, you can deploy WSC automatically. Navigate to Configuration in the WSC UI, at the bottom under WSC Buttons. Click where you would like to show the credentials button. Click submit.

To maintain the highest possible security never supply any access information to services inside support tickets. Information left in support tickets is not encrypted. Instead, use the encrypted Credentials Form to provide access to your services. When your ticket is marked as completed and closed any information you have left will be deleted.

Please do not add any confidential information to the ticket thread. Use the credentials form to secure your information
